RESEARCH PROJECTS

- **Mind the Buffer** (*VLDB 2027*): Conducted a comprehensive analysis of the LSM-tree in-memory buffer design space—the critical component through which every read and write operation must pass—evaluating how buffer implementation, sizing, and tuning bottleneck NoSQL storage engine performance across shifting workloads and hardware. Benchmarked 11 distinct buffer designs—including three hash-hybrid variants—and distilled the empirical tradeoffs into a practitioner handbook of 10 actionable guidelines for buffer selection and tuning. Designed and evaluated an adaptive buffer that dynamically switches implementations on-the-fly to sustain peak performance across workload shifts.
